Email: sachit.exe@gmail.com | Mobile: +44 07393104748 | LinkedIn: [sachit-ravikumar](#) | [My Portfolio](#) | Bristol, UK

MSc Robotics graduate (University of Bristol) with expertise in **AI, Agents, machine learning, computer vision**. Skilled in **Python, C++, PyTorch, TensorFlow, Langgraph, SQL** for developing and deploying scalable AI systems. Passionate about building **end-to-end Software Systems** that solve real-world problems.

EDUCATION

MSc in Robotics, Distinction | University of Bristol | UK | 2023-2024

- **Key Modules:** Robotics Systems, Machine Vision, Intro to AI, Human-Robot Interaction, Bio-Inspired AI.

BEng in Computer Science and Engineering, First Class Distinction | Anna University | IN | 2019-2023

- **Key Modules:** Machine Learning, AI, Data Analytics, DBMS, Linear Algebra, Software Engineering.

PROJECTS

FixFlow - Autonomous AI Quoting Agent For Trade Businesses

- Built a production-grade autonomous AI agent for emergency trades businesses using **LangGraph** and **FastAPI**, handling the full quoting workflow - symptom diagnosis, job classification, dynamic pricing, negotiation, and authority enforcement, end-to-end in under 60 seconds with no human in the loop.
- Engineered a cyclic state machine with 11 nodes, deterministic safety guardrails, and integrations with **Civic MCP**(Calendar availability + prompt injection defence) and **Luffa**(customer interaction), with full node-by-node tracing via **LangSmith** and session persistence via **Supabase**.

Sign Language Detection

- Developed a **DeTr-based object detection pipeline** in **PyTorch** for real-time **sign language recognition**, with emphasis on **dataset curation, model generalisation, and benchmarking** (CNN, YOLO, Transformers) to enhance **accessibility** and **human-computer interaction**.
- Deployed the model on **AWS** using **Docker** and **FastAPI** for scalable, real-time inference and seamless cloud integration.

AI Nutrition Coach for Personalized Diet Planning

- Built a full-stack nutrition and meal planning web app using **React 18, Node.js, and PostgreSQL**, with an LLM agent (via OpenRouter) to generate personalised recipes, analyse URLs, and deliver weekly coaching insights based on user goals, allergies, and dietary preferences.
- Implemented secure **REST API** with auth, BMR/TDEE-based macro tracking, and photo-based meal logging with nutritional value estimation, deployed across **Vercel, Railway, and Supabase**.

TECHINICAL SKILLS

AI & Agents: LangGraph, LangSmith, PyTorch, TensorFlow, OpenRouter API's

Robotics & ML: ROS2, Gazebo, TensorFlow, PyTorch OpenCV, LiDAR integration, Docker

Languages & Frameworks: Python, C, C++, JavaScript, FastAPI, React, Node.js, Flask, C#, MATLAB

Cloud & Deployment: AWS ECS, Docker, Supabase, Vercel, Railway, Git

PROFESSIONAL EXPERIENCE

Full-Stack AI Engineer | Stealth Startup | April 2026 – Present | Remote

- Built and maintained a **real-time voice AI agent pipeline**, reducing time-to-first-audio from ~4,000ms to under 500ms via a pre-warmed greeting cache and session state cache, **Pipecat, Google Gemini Live API**, Cartesia TTS, Google Cloud STT, LiveKit WebRTC, with multilingual support and warm transfer-to-number.
- Eliminated mid-call integration failures and reduced vendor complexity by building an MCP client for unified tool routing, shipping Salesforce and Hubspot OAuth integrations behind a shared validation layer, and designing a **Python industry-vertical agent system** serving multiple business domains from one agent core.
- Maintained production delivery across an **AWS and Kubernetes** monorepo, using **Tailscale** for secure inter-service networking and Cloudflare for edge delivery; hardened CI via CodeQL/Semgrep; built React 19/TypeScript dashboards with Google OAuth, TOTP, and org-level auth; and mentored interns with scoped, shippable work and code reviews.

Frontend Developer | TCR Innovation | January 2022 – March 2022 | Mumbai, India (Remote)

- Designed and deployed user-focused **React/JavaScript** platforms improving engagement by 30% - building responsive UIs, integrating **REST APIs**, and collaborating with stakeholders to translate requirements into production-ready web solutions.

AR Developer | XRBit | April 2021 – April 2022 | Chennai, India

- Built AR and 3D web experiences using **Three.js, Unity, and C#** - developing immersive cultural heritage applications, AR product visualisations, and interactive 3D scenes reaching 2,000+ visitors.
